THE ANATOMY OF AN ATOM

Instructions: Punch out all atom parts. Connect orbit pieces, using slots A & B. Matching colors, letters and slots, slip electron, proton and neutron pieces on electron orbits and nucleus parts.

Place a knot in one end of a three-inch piece of string and slide the knot into the small slot on nucleus. Wrap other end of string around top of electron orbit (slot A) so that the nucleus is suspended in the center of the orbits.

You have made a model of a helium atom!
